### I Introduction to R-Updater

**R-Updater** is a program that keeps your installed software up-to-date.

Upon installation **R-Updater** creates a list of installed programs and checks on a pre-scheduled time if there are new program versions available. When it detects a new version, it notifies the user that it is time to update the program. Then the user can click the program to be updated and receive a link to download the new version the program. If there are several programs for update, the user can mark the necessary programs and do this through one action.

# Software Update Using R-Updater Settings

### 1.1 R-Updater Features

- Giveaway of a Day: A daily updated link to a program which today is a freebie.
- Automatic scan for programs to check for updates.
- Manually added programs to check for their updates.
- Automatic update check completely transparently for the user. You do not need to take any actions to check for new versions available for your installed programs.
- Flexible notification. You may select if you want to be notified about all program releases, including beta versions, or major releases only.
- Versatile scheduler. You may select check time individually for a program, or use default settings.
- Flexible Internet connection settings: support for proxies or direct Internet connections.
- Automatic check against virus infection of **R-Updater**.
- Small system resource consumption: quiet start when all windows processes are already running to prevent delay in windows startup time and automatic unloading from RAM if no update has been found.
- Manual search for programs that are not installed on your computer.
- Smart info filtering with manual settings to display only that information about the programs you want to see.

### 1.2 Contact Information and Technical Support

To obtain the latest version of **R-Updater**, go to:

Product Site: http://www.r-tt.com

**R-Updater** Technical Support Team is available 24 hours a day, seven days a week, and has an average response time less than 4 hours.

Tech. Support: support@r-tt.com

Send your support request to: http://www.r-tt.com/SupportRequest.shtml

### II Software Update Using R-Updater

Updating you software using **R-Updater** is easy. Upon receiving a call that there is a new version is available, go to the **Updates** tab, select the program you want to update and click the **Update** button

#### Updates tab Software List tab

Settings Found 72 installed programs.		

#### Managing the list of programs to update

When **R-Updater** is installed, it automatically creates a list of programs to search for their updates. You may manually delete programs from this list or add them from the update server.

To delete the program (only manually added),

\* Right-click the program and select Delete from the list on the shortcut menu.

#### To add the program,

\* Click the Add Manually button and and select the program you want R-Updater to check for updates.

To verify if the program is present on the update server,

\* Enter the program name into the Search application on server field and press the Enter key.

#### To update the list of installed programs,

\* Click the Rescan installed button and and select the program you want R-Updater to check for updates.

#### Specifying the call level for an individual program

You may specify which type of updates you want to be notified of (all updates including beta versions, all updates except beta versions, or only major releases).

You may specify these default settings on the **Settings** -> **General** tab.

#### To specify the call level,

\* **Right-click the program and select the call level for the program.** or click the **Call Status** button and select the call level.

#### Specifying the time interval to check for updates for an individual program

You may specify how often you want to check for updates for an individual program in the list. You may specify these default settings on the **Settings** -> **General** tab.

#### To specify the time interval to check for updates,

\* **Right-click the program and select the time interval for the program.** or click the **Call Scheduler** button and select the call scheduler.

### III Settings

You may adjust **R-Updater** setting on the **Settings** tab.
